

2020 Michigan Soybean Performance Report

Harvesting Lenawee County Research Plot

Putting Your Checkoff To Work

The Soybean Checkoff
michigansoybean.org

The **2020 Michigan Soybean Performance Report** is a result of a cooperative effort of Michigan State University, Michigan State University Extension and the Michigan Soybean Committee. This information will help you to make informed critical choices for your 2021 soybean crop. Publication and distribution of this report is provided by checkoff funds through the Michigan Soybean Committee. This data can be accessed electronically at www.varietytrials.msu.edu/soybean and in a searchable database at www.soybeanyielddata.msu.edu.

2020 MICHIGAN SOYBEAN PERFORMANCE REPORT

D.WANG, R.G.LAURENZ, R.STOUTENBURG, J.F.BOYSE,
DEPT. OF PLANT SOIL & MICROBIAL SCIENCES

This report provides information on the performance of Conventional, Liberty Link, and Roundup Ready soybean varieties in Michigan in 2020.

The presentation of data for the entries tested does not suggest approval or endorsement of varieties by Michigan State University.

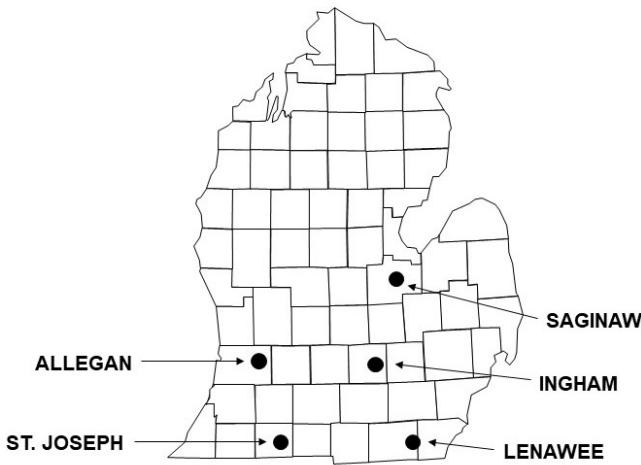

TESTING PROCEDURES

Six trials are reported here. The Central locations for the Conventional and Roundup Ready trials include test sites in Allegan, Ingham and Saginaw Counties. The Southern locations for the Conventional and Roundup Ready trials include test sites in Ingham, Lenawee, and St. Joseph (irrigated) Counties.

Nineteen seed companies entered a total of 196 commercial varieties, not including the experimental MSU lines. The cooperators, planting dates, harvest dates, and other site details for the locations are listed below.

Seed was planted in 6-row plots, 20 feet long with 15-inch row spacing, at a depth of 1.5-inches. The planting rate was 160,000 seeds/acre. At each location, varieties were replicated four times in a Randomized Complete Block Design (RCBD). All locations were planted to 17 feet with 3 foot alleys that were not trimmed. Only the center four rows were harvested. Experimental design, data management, and data analysis were conducted with AGROBASE Generation II, (Agronomix Software, Inc., Winnipeg, Canada).

2020 TEST SITE COUNTY LOCATIONS

TEST SITE INFORMATION

Lenawee County

Nearest city: Britton
Cooperator: David & Jason Woods
Planting date: 6-2-2020
Harvest date: 10-14-2020
Previous crop: Corn
Soil type: Clay Loam
Fertilizer: 250# /A K2O
Herbicides: Pre-emerge 12 oz. Authority MTZ, 1.5 pt. /A
Medal II- Roundup PowerMax 32 oz. over the entire field.
Conventional & Liberty Link Trials- 1 qt. Basagran, 5 oz. /A
Raptor
Roundup Ready Trials – 32 oz. /A Roundup PowerMax

Hillsdale County

Nearest city: Reading
Cooperator: Robert Lennard
Planting date: We were unable to plant this location, due to COVID-19 restrictions.

St. Joseph County - Irrigated

Nearest city: Mendon
Cooperator: Roger and Anne Gentz and Family
Planting date: 5-26-2020
Harvest date: 10-15-2020
Previous crop: Commercial Corn
Soil type: Oshtemo
Fertilizer: 200#/A 0-0-60
Herbicides: Pre-emerge 12 oz. Authority MTZ, 1.5 pt. /A
Medal II Roundup PowerMax 32 oz. over the whole field
Conventional & Liberty Link Trials- 1 qt. Basagran, 5 oz. /A
Raptor
Roundup Ready Trials – 32 oz. /A Roundup PowerMax

Ingham County

Nearest city: Williamston
Cooperator: Cremer Farms
Planting date: 6-4-2020 conventional trials and 6-5-2020 for the Roundup trials
Harvest date: 11-2-2020 conventional trials and 11-3-2020 Roundup trials
Previous crop: Corn
Soil type: Sandy Loam Capac
Fertilizer: Grid Potash/ MAP
Herbicides: Pre-emerge Authority MTZ16 oz. /A, 1.5 pt. /A
Medal II 32 oz. Roundup PowerMax
Conventional & Liberty Link Trials- 1 qt. Basagran, 5 oz. /A
Raptor 5 oz. /A Assure II over entire field
Roundup Ready Trials – 32 oz. /A Roundup PowerMax

Allegan County

Nearest city: Wayland
Cooperator: Jim Wykoski
Planting date: 5-13-2020
Harvest Date: 10-7-2020
Previous Crop: Corn
Soil Type: Colwood Silt Loam
Fertilizer: 200#/A Potash
Herbicides: Pre-emerge 16 oz. Authority MTZ, 1.5 pt. /A
Medal II- over the entire field 32 oz. Roundup PowerMax
Conventional & Liberty Link Trials- 1 qt. Basagran, 5 oz./A
Raptor, First Rate
Roundup Ready Trials – 2 applications of 32 oz. /A
Roundup PowerMax
1 application 5 oz. /A Assure II

Saginaw County

Nearest city: Saginaw
Cooperator: Tom Hoff
Planting date: 5-24-2020
Harvest date: 10-10-20
Previous crop: Corn
Soil type: Clay Loam
Fertilizer: 200#/A Potash
Herbicides: Pre-emerge 12 oz. Authority MTZ, 1.5 pt. /A
Medal II- over the entire field 32 oz. Roundup PowerMax
Conventional & Liberty Link Trials- 1 qt. Basagran, 5 oz. /A
Raptor
Roundup Ready Trials – 32 oz. /A Roundup PowerMax
5 oz. /A Assure II

Sanilac County

Nearest city: Sandusky
Cooperator: Gerstenberger Farms, Inc.
Planting date: We were unable to plant this location, due to
COVID-19 restrictions.

GROWING CONDITIONS / COMMENTS

There were some heavy rain showers during the planting season, but otherwise planting was normal. The St. Joseph county site had a heavy rain immediately after planting causing very low stand counts and high variation, so the data from these trials will not be published. The COVID-19 pandemic caused restrictions to research and travel, so the Sanilac and Hillsdale sites were not planted. Most of Michigan was dry during the early growing season and White Mold as well as most diseases were not a factor. The Allegan location was dry and spider mites came to the west side of the field causing irregular growth and some trials to be thrown out. Excessive rain in August caused plants to grow tall and caused more lodging in some areas. Early October was favorable for harvest. After 2 weeks of rainy weather, early November set record warm temperatures for the remainder of the harvest season. Overall yields were good in most areas.

USING THE DATA

Results are presented in Tables 1 through 6.

Yield: Yield is expressed as bushels per acre at 13% moisture and is reported as single and across site means for 2020. Two and three year means are also presented when applicable.

Height: Plant height, reported in inches, was measured at maturity from the soil surface to the tip of the main stem. The reported values are means of 4 reps at all sites.

Lodging: Lodging scores reflect the erectness of the plants before harvest. The reported values are means of 4 reps at all sites. Ratings are based on the following scale:

- 1= Almost all plants are erect.
- 2= All plants leaning slightly, or fewer than 25% of the plants are down.
- 3= All plants leaning moderately (45%), or 25% to 50% of the plants are down.
- 4= All plants leaning considerably, or 50% to 80% of the plants are down.
- 5= Almost all plants are down.

Phytophthora Resistance: Information on the presence of Phytophthora resistance genes was provided by the organizations entering varieties. Varieties denoted with:

- 1a are resistant to phytophthora Races 1, 2, 10, 11, 13-20, 24, 26 & 27.
- 1b are resistant to Races 1, 3-9, 13, 15, 18, 21, & 22.
- 1c are resistant to Races 1-3, 6-11, 13-15, 17, 21, 23, 24 & 26.
- 1k are resistant to Races 1-11, 13-15, 17, 18, 20-24 & 26.
- 3 are resistant to Races 1-5, 8 and 9.
- 6 are resistant to Races 1-4, 10, 12, 14-16, 18-21 & 25.
- 7 are resistant to Races 12, 16, 18 & 19.

Soybean Cyst Nematode Resistance (SCN): Seed companies that screen varieties for SCN resistance have indicated if the variety has known susceptibility or resistance

- R – Resistant
- MR – Moderately Resistant
- S – Susceptible
- MS – Moderately Susceptible

These notations followed by a number indicate the identified cyst nematode race. The source of resistance was mostly PI88788 with some Peking and PI89722. Sources are found in parenthesis after the variety name in the variety list table.

SELECTING A VARIETY

LSD (least significant difference, found at the bottom of each data column) values are useful when comparing two varieties in the same table. If the difference between two varieties is less than the LSD value, this difference is

probably due to chance or minor environmental differences. However, if the difference between two varieties is greater than the LSD, there is a 95% or greater probability that the difference in performance is due to the greater yield potential of one variety. Valid comparisons can only be made between averages in the same column. The C.V. (coefficient of variation, found at the bottom of each data column) is indicative of the trial precision. Lower C.V. values indicate more precise trials.

The primary consideration in selecting a variety is yield. When evaluating a variety, consider yield performance over locations and across several years, if available. Considerations other than yield are also important in selecting a variety. It is especially important to select a variety that will mature before the first frost in the fall.

The degree of lodging varies among varieties. Lodging ratings should be used to evaluate potential harvest losses. Growers who have experienced lodging in the past and have had harvest problems may want to select a more lodging-resistant variety. Alternatively, a variety susceptible to lodging may be planted at a slightly lower population to increase standability.

Growers should note seed size when selecting planting rates. Planting rates should be based on number of seeds per acre and not on pounds per acre. It often benefits growers to select a few good varieties for planting each year. Yield determination and careful field evaluation during the growing season will add to the grower's knowledge of variety performance and allow for better selection.

HERBICIDE column in chart (HERB)

Conv=conventional

LL=Liberty Link

RR1=Roundup Ready

RR2X=Roundup Ready 2 Extend

E3=Enlist E3

GT27=Glyphosate Tolerant

LLGT27=Liberty Link and Glyphosate Tolerant

Treated soybean seed submitted for Michigan State University's Soybean Performance Trials are noted by abbreviation in the 'TMT' column. Questions concerning treatments should be directed to the seed company. Contact information can be found in the 'Directory of Companies'.

Michigan State University varieties are experimental

SELECTING SOYBEAN VARIETIES

Mike Staton, MSU Extension Soybean Educator

The soybean varieties you select will significantly affect your income in 2021. Because of this, you should consider yield, maturity, pest and pathogen resistance, herbicide-tolerant traits, lodging and quality when selecting varieties.

Yield: Yield is one of the most important characteristics to consider when selecting soybean varieties. A long-term analysis of the yield data from the Michigan Soybean Performance Reports shows that selecting the highest yielding varieties can increase yields by 5 to 10 bushels per acre. A variety that performs well under ideal conditions may not yield as well as others when confronted with yield-limiting factors. Yield data collected from multiple locations and over several years will help you select the best adapted varieties for your farm.

Maturity: An analysis of soybean yield and maturity data from the 2009-2016 Michigan Soybean Performance Reports showed that maturity has little effect on soybean yields when the highest-yielding varieties are selected within the adapted maturity range for the area and planted in mid to late May. The analysis also showed that on average, soybean harvest operations are delayed by one day for each 0.1 increase in soybean maturity group. Planting varieties from a range of adapted soybean maturity groups is recommended.

phytophthora stem rot

Pest and pathogen resistance: Significant yield losses from soybean aphids, soybean diseases such as Phytophthora root and stem rot, white mold, sudden death syndrome and soybean cyst nematodes can be reduced by selecting resistant or tolerant varieties. In fact, variety selection is your best option for managing these pests and seed catalogs are excellent sources of information. Seed companies typically use a rating scale of 1 to 9 and producers need to be careful as 1 is excellent and 9 is poor in some catalogs, while in others it is the opposite. These ratings are useful when comparing varieties from a given company but not across companies.

Iowa State University conducts the most comprehensive soybean cyst nematode resistant variety trials in the U.S. Iowa State University Extension publication IPM 52, provides the source of soybean cyst nematode resistance, yield performance and soybean cyst nematode population suppression effects for all the entered varieties. The 2020 report will be available online at the Iowa State University SCN-Resistant Soybean Variety Trials website. The report should be transferable and useful on your farm provided the varieties tested are adapted to your farm and the soybean cyst nematode population type at the trials is similar to the soybean cyst nematode population type in your fields. Producers should rotate sources of soybean cyst nematode resistance and seed suppliers are an excellent source of information.

Herbicide-tolerant traits: Varieties having herbicide-resistant traits are an important tool for managing herbicide-resistant weeds such as waterhemp and marestail.

Lodging: Lodged soybean plants can increase harvest losses and significantly delay harvest operations and variety selection can help reduce lodging problems in productive fields.

Quality: Producers should also consider quality characteristics when selecting soybean varieties. Some of our leading export markets demand soybeans consisting of 19 percent oil and 35 percent protein. As global competition increases, Michigan soybean producers will need to meet this standard to maintain access to these markets.

soybean variety effect on lodging

INDEX FOR 2020 SOYBEAN VARIETY PERFORMANCE TRIALS

There were 196 varieties from 19 private seed companies entered in 5 county test sites in the 2020 Soybean Variety Performance Trials. **The first number within parentheses refer to the table in which the variety appears.** Company names used in association with variety numbers refer to the brand, and the numbers are the variety designation. **The SCN source of resistance if any, is listed in a second parentheses.** PI88788 is abbreviated as P8.

MICHIGAN
SOYBEAN
COMMITTEE

The Soybean Checkoff
michigansoybean.org

Fellow Soybean Producers,

The selection of the best soybean varieties for your farm is likely to be the most critical decision to impact your soybean yields. To inform your decision, this report contains the most complete source of unbiased yield comparisons from across the state.

The investment of checkoff funds in this publication is an example of our mission to "Manage checkoff resources to increase return on investment for Michigan soybean farmers while enhancing sustainable soybean production". We feel confident in the value of this resource and hope that it proves as a valuable resource for your farm.

We wish you a safe and profitable 2021 season.

Sincerely,
Michigan Soybean Committee Directors

District #1 Dan Rajzer, Decatur
District #3 Laurie Isley, Palmyra
District #5 Mike Sahr, Saginaw
District #7 Steve Koeman, Hamilton

District #2 Pete Crawford, Dansville
District #4 Dennis Gardner, Croswell
